

BEARS

Bear habitats are mostly forests. But some even live in the Arctic. Polar Bears adapt to their cold environment because of their thick fur. Bears live throughout the world. Bears in China also exist. They are called Panda Bears. There are also Sloth Bears. Not the Sloth, but a Sloth Bear. Most bears live in Asia. Like the Asian Black Bear.

FUN FACT!

Surprisingly, they can get eaten too. Tigers, wolves and other bears too. If a bear is swimming in the water, orcas might come and attack them. The cubs are more vulnerable. Leopards attack them sadly.

conclusion

There are many types of bears around the world, but most of them are in Asia. They are omnivores, that are mammals. Even though they are fierce, they still can be hunted down by other carnivores. They are endangered species.

Bears are mammals that live mostly in the forest. They are omnivores (meaning they eat meat and plants.) They mostly eat berries, nuts, honey and fish. During winter, they rest throughout the season, called hibernating.

DID YOU KNOW?

There are different kinds of bears. There are
Polar Bears
Black Bears
Brown Bears
Much more

Most bears are dangerous to humans. But there is a high chance of a bear that is tamed. Only the lucky ones like the people from the circus can have a chance. Sadly, most types of bears are extinct.
